

IN THE SPECIFICATION:

Please amend the specification as follows:

In the Paragraph beginning at Page 8 Line 15:

A puncturable foil 42 is mounted on the ~~second~~ first rim 36 32 of the annular shoulder 30 and extends across the open end 16 of the liquid container unit 12 to close the blind-ended bore 22 adjacent to the open end 16 of the liquid container unit 12.

In the Paragraph beginning at Page 10 Line 22:

A fluid conduit 100 is located in the through bore 68 of the applicator unit 60. The fluid conduit 100 includes a pointed end 102 which is positioned to be in contact with the puncturable foil 42 mounted on the ~~second~~ first rim 36 32 of the annular shoulder 30 of the liquid container unit 12 when the applicator unit 10 is in the stored position. The pointed end 102 punctures the puncturable foil 42 and moves into the chamber 46 in the liquid container unit 12 and into fluid contact with the nail polish remover liquid 48 contained in the chamber 46 when the applicator unit 60 is moved into the use position. A dispensing end 104 of the fluid conduit 100 is fluidically connected to the applicator element and is securely mounted on the applicator element so that the fluid conduit 100 will move with the applicator unit 60 between the stored position and the use position and will be mounted securely enough to puncture the puncturable foil 42.
